INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.

- 13a Give (1), the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.

Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.

Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.

- 13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.

14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)

Exhibit A

Origin and Breeding of R158

1. R158 was derived from the cross - MS Sturdy/4/ (MS Seu Seun/3/T. timopheevi/Marquis²//Kan²) F4 which was made by DEKALB AgResearch, Inc. in the spring of 1970 at Wichita, Kansas.
2. The F1 was grown out in the Fall of 1970 in the Wichita greenhouse.
3. The F2 seed was planted in the Wichita nursery in January of 1971, and a single plant selection was later made in field plot 115300.
4. Seed from the individual F2 plant was grown at Wichita in 1971-72 in plot 104500. The F3 plants were harvested in bulk after roguing.
5. F4 seed was planted in a small increase and crossing block (175096) at Wichita in 1972-73 when it underwent additional purification. This year the F4 was also widely tested for yield and adaptation.
6. Hybrids of the R-line were yield tested in 1973-74. Hybrids showed good yield and uniform restoration. The R-line was also planted in a 1¼ acre increase and crossing block arrangement and was again rogued.
7. R158 is stable and uniform over generations similar to the variety Sturdy.

Exhibit B

Botanical Description of the Variety

R158 is an early, semidwarf hard red winter wheat having similar plant characteristics to the variety Sturdy but has smaller leaves and more tendency for lodging at maturity. R158 also differs from Sturdy in having Timopheevi cytoplasm and pollen-restoring genes that restores pollen fertility to hybrid wheats with Timopheevi cytoplasm. It is also not as erect-growing in the early Spring as Sturdy.

R158 is further distinguished by the following characteristics: Stem white, moderately strong; spike awned oblong to tapering middense; erect to inclined; glumes glabrous, white, midlong, midwide; shoulders square; beaks acuminate; awns white; kernels red, hard, elliptical; germ midsize; crease wide and deep; cheeks angular; brush midsize without collar.

Leaf rust pustules will develop more densely on R158 than its parent Sturdy. However, it carries resistance but not to all races and part of its resistance is apparently of the slow rusting type. It is susceptible to soil borne mosaic and powdery mildew.

Exhibit D

Data Indicative of Novelty

Novelty is based on the unique combination of the following characteristics: R158 most closely resembles Sturdy but it has Timopheevi cytoplasm and pollen restoring genes. It also differs markedly in having taller and weaker straw than Sturdy. Its gluten properties are stronger and more tolerant to mixing than Sturdy (see enclosure).
